FOREWORD

It is with considerable pride, also some regret, that I offer below without reservations, and on mail bids only, my personal collection of Early United States Half Dollars.

This Collection is catalogued by Beistle Nos. thru 1836 except for coins I have not been able to locate in his book, and these have been assigned my own numbers designated by O. and a detailed description of same given, in the hope that this will aid future cataloguers as a supplement to Beistle's work, and thereby further the still far from complete study of Early U. S. Halves.

I have had and still have great pleasure in studying the many interesting die varieties to be found in the Early Halves, but our ever increasing Numismatic business makes it impossible to find time to devote to them, so have decided to catalog and sell while I can still do the job myself.

Interest in Early Half Dollars brought one of my greatest thrills in 30 years of collecting and 20 years as a professional dealer, when in 1951 I discovered an Extremely Fine specimen of the 1817 over 14 half dollar, the overdate very sharp and clear. **This was then and still is today, the only known specimen of public record, examined and authenticated by several experts including The A.N.S. Namely the Eliasberg Coin.** I sold it to him in 1953 principally because I made the mistake of sending it to the New York Publisher of a coin catalog, who although proceeding to list it in his 1952 catalog **for the first time,** did not give me credit for making it available, but instead gave credit (page 114) to a defunct California Stamp Co. who had never seen this coin. Partly to refute this misrepresentation (still uncorrected after 7 years) I listed it in my Auction sale of Jan. 23rd, 1953 (a full page with plate) and sold it to Mr. Eliasberg.

The following Early U. S. Half Dollars including over 360 pieces in Gem Unc. and Proof, I believe from a standpoint of quantity and quality to be the finest collection offered to the numismatic public in the past 20 years.

TO YOU COLLECTORS GOOD LUCK IN OBTAINING SOME NEEDED ITEMS FOR YOUR COLLECTION.

58—**1811 O. 3** Large 8 This coin has the B. 4a obverse but a different reverse as letters are not drawn to edge, and there is some milling. Arrowheads and all letters are separated. No die breaks on Rev. slightly toned at edges. **A Beautiful Frosty Unc. Gem without a Blemish. Much Rarer in this condition than catalog price indicates, should Bring** -- **65.00**

61—**1811 O. 5 punctuated date** same as B. 7J except for fine die line from upper bust into left field and another from upper bust into left field and another from upper lip. **Rev.** a line connecting feathers back of left claw to lower edge of wing, another from right wing points to base of R. **Brill. Unc. Gem** ---------- **60.00**

62—1812 over 11, B. 2aB Choice Unc. frosty Mint Luster **75.00**

66—1812 B. 5aH Unc. frosty luster 21.00

67—**1812 O. 2** Large 8 and wide spaced date, all figures slanted to left, all stars on left drawn to edge, first 3 and last 3 stars sharper than others. **Reverse** all arrowheads flat, die crack from left leaf of olive branch across tip of wing to base of UN, another connects top of United St then thru A and breaks into 2 lines across and below tes to scroll. **Brill. 88—**1817 over 14 O. 2** As stated in the preface this coin was sold to Mr. Eliasberg in 1953, however the following is a detailed description of same for the record.

Obverse date rather wide and evenly spaced with all figures slanting to left. Original 4 is clear, the lower left point showing distinctly in front of stand of 7. The upper point of 4 barely shows above top of 7. lower right edge of stand of 4, shows clearly on the lower right half of stand of 7. Also the vertical serif on the horizontal crossbar of 4 shows clearly to right of 7. All stars are struck sharp. The first star points to upper corner of segment. 7th star points to center of segment and lower half of upper curl. Milling is heaviest at lower left, and fades to a thin line at upper right above cap and 8th star. A circular die crack spans the obverse from rim above upper peak of cap passing downward across lobe of ear, lower curl and just to right of 7.

Reverse struck clear and sharp. Both A's in America points to lower edge of segments, lower right serifs are missing on I's in United and America, a slender sharp struck 5 leans to right and point of feathers extends entirely across top of 5 and just to left of it.

Also all Specimens show curved points or outline to bottom of upper loop which is common to the 9 but has not been found in any of the 8's on the many specimens I have examined. **It should be noted however that this variety has a small 2 with square base whereas B. 2B with a very clear 9 inside of O has a small 2 with curled base. 132—1822 over 21 B. 8H There can be no mistaking the detailed description and checking on this die, However there is another slight and obvious error in Beistle's Book description, as he notes that side of 1 can be seen at lowest part of curl of 2, on the left, whereas it should be lowest part of curl of 2 on right. This Rare overdate is in the finest possible condition, A Brill. Unc. Gem well centered and well struck, until its equal is seen. 139—1823 over 22, Broken 3, B. 9J altho Beistle did not notice this variety as being an overdate, nevertheless it plainly shows that lower half of 2 was removed and lower half of 3 cut in its place, the 2 halves barely join at different angles giving appearance of a Broken figure which in fact it is, This variety of 1823 being the only example of this type of die patching that I know of and is the only description needed. This and the following lot are the only variety found in which the 3 leans to the right due to unnatural angle in attaching bottom of 3 to top of 2. All other 1823's are upright or lean to left. A Choice Frosty Unc. Coin and an exceedingly Rare Variety. Worth ---------- **100.00**

140—**1823 over 22 O. 1** This and the preceding lot support and prove each other as they are both from the same identical die, but the engraver must have noticed the rather loose connection of the two half figures forming the 3 and proceeded to scoop a little chunk out of the die at this connection to obtain a stronger union, which was accomplished, but also resulted in a crude looking figure which has been referred to as the ~~ugly 3~~, more common than the preceding variety but still Rare in Choice condition, **A frosty Unc. 193—**1827 B. 10L curled base 2, of the three biggest sleepers in the Lettered edge halves** (previously mentioned), I consider this 1827 variety in Brill. Unc. condition to be the most underrated coin in this series. A study of sale catalogs of past 10 years indicates that the Rare 1796 halves have actually been offered in choice condition more times than this one. **Here are some of the Great Sales and collections of recent years that did not have this coin in Unc. condition. The Great Dunham Sale 1941, Roach 1944, World's Greatest Collection of U. S. silver and The Hall collection 1945, Neil and Geiss sales 1947, Royal sale 1948, Menjou and Mehl's Golden Jubilee sales 1950, Guggenheimer 1953, Davis-Graves 1954, Baldenhofer 1955, Donlon and Bostic sales 1956, Empire sale 1957, and the last seven A.N.A. sales. This is all of the sale catalogs that I have had time to check, but here you will recognize many of the great collections that have been sold in the past 18 years and not a single one contained this supposedly common half dollar in Unc. condition, yet this same group of sales offer the extremely Rare 1796 half dollar in Unc. & proof conditions at least seven**

times. You be the judge as to whether or not this coin indicates a great investment opportunity. This and the following 2 lots are the only Unc. ones I have had an opportunity to buy in past 10 years. To give you a further clue as to Rarity, Beistle lists 32 die varieties of 1827 (6 more are listed herein) but only one obverse die is known for this variety. **A Brill. Unc. Gem traces of light gold and purple toning at edges, compared to many other coins this would be a steal at** ---------- **150.00**

202—1828 O. 3 The Rare curled and knobbed 2, this die seems to be same as B. 3D but as he fails to mention whether or not the latter has a knobbed 2, a feature that was discovered after Beistle wrote his book. This coin as Beistle mentions in connection with B. 3D, is a proof. Brill. perfectly centered and well struck. This is the best one I have heard of, undoubtedly one of the finest and perhaps the finest in existence. Excessively Rare, Worth ---------- **250.00**

Fine die crack starts from tip of left olive leaf to top of UN, another connects bases of ITED STAT, still another at top of ATES. **Brill. Unc.** ---------- **11.00**

209—1828 O. 8 small 8's close date, 1st star points to lower half of segment and distant from bust, 7th star to upper half and to top of curl. 8th star to upper half and last star to space between 2 segments. Rev. 1st A in America to center and last A to upper edge of segment, a fine die line around top edge of legend from left of U to right ending above M. I consider this coin to be the most beautiful U. S. Bust Type half dollar I have ever seen including proofs. I am listing it as a Mat Proof, the field does not have the mirror like finish of the usual proof. Yet in spite of a slightly frosty effect it is superior in finish and Brilliance to Unc. Not only the Beautiful delicately toned finish of this gem, but the centering, milling and striking thruout are so sharp and exceptional, as to preclude the probability of it coming from an ordinary commercial die. Brill. Mat Proof, Excessively Rare ---------- **125.00**

210—**1828 O. 9** small 8's square 2, all stars have one point connected to milling, 1st star points to upper edge of segment, 7th star to upper half and opposite point to center of headband, curl stands out well clear from headband, 8th star to center and last star to upper edge of segments. **Rev.** both A's in America point to lower half of segments and last one very close to arrow head. **A Choice Brill. Akcidefect lines below bust and at top edge of date. **Reverse** akcidefect lines below left wing and from top of wing to scroll below E, at TA in states, below scroll and end of scroll to top of right wing. Note: I have never been able to find the 1834 small date and letters variety with what could be clearly defined as large stars, of the many dozens examined, all stars are approximately the same dimensions and none are comparable to the stars found on the Large Date, Large Stars variety. I believe this listing in The Guidebook, (like the 1828 small 8's square 2 small letters and 1820 over 18) should be eliminated.

256—1834 O. 7 Large date small stars and letters, All large date, small letter 1834's I have checked have small stars, all large date large letters have large stars. The 4 in this variety is crudely formed and shows recutting above crossbar, Scarce Brill. Unc. Gem ---------- **17.50**

large heavy 50 C set high with olive stem nearly touching top of C. This variety from a worn or poorly cut die, leaving flat portions in curls, scroll and left wing, a really scarce variety being much underrated in the Guidebook, as many sold for this variety actually are the small star type. **Unc. lightly toned** ---------- **25.00**
